

One connected journey. Every role in sync.

Qconnect coordinates outpatient care from arrival to follow-up through one shared encounter, role-specific workspaces and assistive AI.

Local workflow verified | Built for a measured pilot

THE CONNECTED PATIENT JOURNEY

ONE SHARED ENCOUNTER | LIVE STATUS | ROLE-BASED ACCESS | AUDITABLE ACTIONS

ROLE-BASED OPERATIONS

Reception, triage, doctor, lab, pharmacy, oncology and command views work from the same patient journey.

Less re-entry. Clearer handoffs.

GUARDED AI ASSISTANCE

Draft SOAP notes, medication checks and selected diagnostic review support staff. A clinician validates every output.

AI proposes. People decide.

PILOT, MEASURE, SCALE

Start with one OPD pathway, establish a baseline, configure the workflow and evaluate with hospital teams.

Measure wait, handoffs, time and adoption.

THE PLATFORM PROMISE

**Coordinate care,
not screens.**

Shared context connects patient flow, clinical work and status visibility while care teams retain every decision.

PROPOSED NEXT STEP

A controlled OPD pilot

Baseline > Configure > Evaluate

Enterprise scale, live payments, ABDM/FHIR integration and regulatory validation remain deployment workstreams.

WHAT'S INSIDE THE PLATFORM

Built for every role.

Deep where it counts.

Each team works in a purpose-built space on one shared patient record, with assistive AI that stays under clinician control.

ROLE-BASED WORKSPACES

Reception

Register, check-in and walk-in intake

Triage

Vitals capture and acuity scoring

Doctor

Patient 360, notes and orders

Lab

Test orders, results and imaging

Pharmacy

Drug catalog, prescribe and dispense

Billing

Invoices, payment and discharge

Oncology

Staging, chemo and tumor board

Command

Live queues and operations view

ASSISTIVE AI, UNDER CLINICIAN CONTROL

AI proposes. A clinician approves every output.

Ambient notes

Offline voice dictation drafts SOAP notes for review

Formulary help

Generic and interaction guidance on prescriptions

Imaging review

On-device X-ray and CT / DICOM analysis

Voice intake

Speak to fill new-patient registration

PLATFORM FOUNDATIONS

Real-time status

Role-based access

Audit trail on actions

Consent + OTP verification

Local / offline AI

SCOPE TODAY

An operational prototype, verified in local workflow.

READY FOR A CONTROLLED OPD PILOT

Enterprise scale, live payments, ABDM / ABHA / FHIR interoperability and regulatory validation remain planned deployment workstreams.
